# ADAPTIVE XDR PLATFORM

ThreatDefence is an XDR (Extended Detection and Response) cyber security platform, providing visibility and threat detection across your network, endpoints, servers, cloud assets and third-parties in your supply chain. We deliver the platform to you as a fully managed service, with low cost and fastest enrolment time in the industry.

Key Differentiators

- ✓ One stop solution with rich functionality
- ✓ Any security data source can be integrated
- ✓ Continuous assurance across all security domains
- ✓ Proactive Phishing Prevention
- ✓ Vendor Risk Detection
- ✓ Real Time Dark Web Monitoring
- ✓ Ongoing threat hunting to detect unknown threats

Why XDR?

These days, organisations are seeking simple and effective solutions to detect threats across their entire digital footprint, presented by their on-premise locations, data centres, cloud, and remote workers.

Most of the existing security solutions try to solve this problem from a particular angle, implementing threat detection either at network, cloud, endpoint or perimeter level. Such systems become ineffective at detecting modern sophisticated attacks where attackers move laterally between systems, evading traditional security defences and leaving few traces of their actions.

XDR Capabilities

Our XDR platform protects the entire enterprise, collecting information from all environments, including risks associated with your partners and suppliers. The platform correlates security events across all sources, and applies advanced machine learning to detect sophisticated threats and provide insights over the entire enterprise's digital footprint.

On-premise networks

Branch offices

Remote workers

SaaS

Cloud

Custom apps

User Endpoints

Email

Dark Web

Get your data to work for you

Our unique XDR platform provides full cycle detection, investigation and response across your endpoints, servers, network, cloud workloads and enterprise SaaS products.

Connecting all security systems into a single platform provides greater visibility, unmatched threat detection perspective, and establishes detailed context for proactive threat hunting and rapid incident response.

ThreatDefence's XDR platform truly makes your security data work harder for you. We integrate all the security data you can possibly reach, including data that directly resides within your network and on your endpoints, as well as the external data such as cloud workloads, SaaS applications, Dark Web breaches, compromised credentials, external vulnerabilities, and weaknesses and exposures related to third-party organisations in your supply chain.

24x7 Detection and Response

We pair our cyber security technology with trained and experienced security specialists who work 24x7x365 to deliver true cyber defence for your business. Our expert threat hunters gain insights from your security data, deep diving into any anomalies, suspicious events, and any unexpected behaviours observed on your network. As part of a threat hunt, we not only find previously undetected threats, but also enhance your detection capability by adding new rules and fine tuning the platform to stay ahead of attackers.

We completely integrate into your current workflows, and follow your escalation procedures so you can counter a security threat before it causes any damage.

Continuous Monitoring
We monitor security events and detect threats in real time, 24 hours a day.

Security Geeks
Our people love cyber security, and organically extend your existing team to keep you secure.

Real World Hunting
We know who is attacking you and what their next steps will be. It is not just alerts and thresholds.

Incident Response
Get an immediate help from world-class experts when every second counts.

What Our Customers Say

"

I cannot endorse this product enough! ThreatDefence provides a top class solution that continuously finds and clearly defines our top risks. Great integration capabilities and tailored functionality makes it a winner.

"

Peter Robinson, Head of Security, Zip Money

"

Effective decision making is driven by the strength of the information available. Out of the box connectors and dashboards allowed us to move from implementation to action in minutes. Combining TD's capability with their proactive management service and regular posture reviews places us in a strong position of readiness.

"

Ross Forgione, CIO, Johnson Winter & Slattery

About ThreatDefence

ThreatDefence provides innovative SIEM, SOC-as-a-Service and proactive cyber defence solutions to MSP's and Enterprises. Our Adaptive XDR Platform was created to help companies of any size to deploy a world-class detection and response, embracing all information that businesses can reach to, would it be within their network, on the dark web, or hiding deep into their supply chain.

We believe in open ecosystems and connect you to any and all threat intelligence feeds and log sources, instantaneously providing you with actionable security insights.
