# PROTECTING MODERN ENTERPRISES

The attack surface of modern enterprises is vast like never before, comprising numerous networks domains, clouds and SaaS applications stretched across multiple geographic locations.

For every digital event in your business there is some amount of machine data generated. This machine data provides valuable insights and, if properly collected and analysed, helps you make better security decisions. It contains a categorical record of transactions, customer activity, sensor readings, security threats and other activities.

The only credible way to establish a robust cyber security detection and response capability is to get this data to work for you, and that is what ThreatDefence is all about.

While most of the existing security solutions try to solve the threat detection problem from a particular angle, implementing their detection capabilities either at network, cloud, endpoint or perimeter level, ThreatDefence's Adaptive XDR platform embraces all your security data, from any environment: cloud, SaaS, network, on-premise, remote, or virtual.

**Windows/Linux/Mac endpoints**

**External and internal vulnerabilities**

**Network Behaviour and network flows**

**SaaS and bespoke applications**

**Public cloud systems**

**Cyber risk factors of third-party vendors**

**Dark Web data**

**Honeypots**

## Business-Friendly Security

ThreatDefence provides a fully managed, plug & play experience, transforming machine data into actionable insights and executive-friendly reports. You do not need to maintain multiple security tools and run complex investigations with endless cross-system integrations, as ThreatDefence establishes context for all security events in your organisation, automatically correlating data from multiple sources and investigating anomalies.

✓ Easy deployment process with any data source supported

✓ Highly skilled security analysts 24x7 - Scale our capability, not headcount or infrastructure

✓ SOC as a Service becomes an organic extension of your team

✓ Integrated external data - dark web, third-party vendor risks, external vulnerabilities and breaches.

We integrate all the security data you can possibly reach, including data that directly resides within your network and on your endpoints, as well as external data such as cloud workloads, SaaS applications, Dark Web breaches, compromised credentials, external vulnerabilities, and weaknesses and exposures related to third-party organisations in your supply chain.

Our platform provides an unmatched capability to visualise your networks and systems and expose high-risk areas across cloud, on-premise or virtual, and delivers an end-to-end cyber security solution, with full cycle detection, investigation and response across all areas of your enterprise.

In addition to continuous, context-rich detection and response, our platform also brings a real-time security assurance capability to your organisation. Ongoing monitoring of security configurations on-premises and in cloud, as well as detection of vulnerabilities and weaknesses in your external perimeter and your partner organisations, provides important context and helps predict external threats before they get a chance to reach your environment.

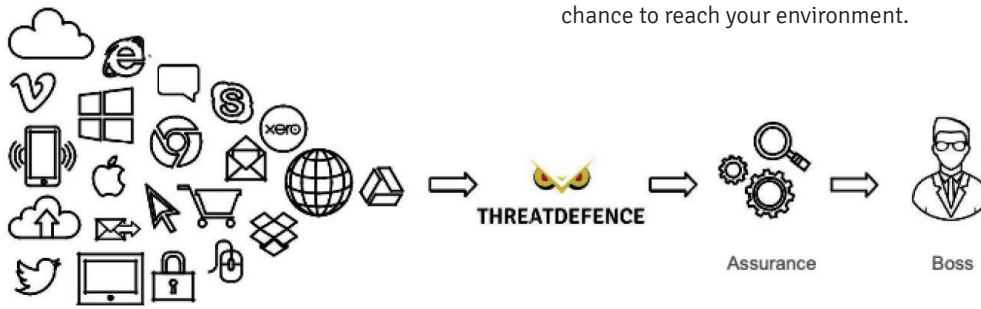

## Your Security Posture In Real Time

There are many factors that constitute your security posture - including your patching cadence, configuration weaknesses, or external threat indicators. At ThreatDefence, we make sure you do not miss anything and get all details on your cyber security posture in real time. Our live dashboards and reports visualise your risks and provide in-depth details on the risk factors with the click of a button.

✓ Compliance reporting

✓ Cloud security controls

✓ Configuration baselines

✓ Vulnerability management

✓ Third party risks

# Key Features

### Any Data
Integration guarantee for
all your log sources

### Secure
Secure and hardened platform with
rich RBAC and SSO capabilities

### True Elasticity
Unlimited scalability for data
ingest and retention

### Multi Tenancy
Multi-tenanted indexes and dashboards
for MSP and M&A scenarios

### Dashboards
Robust dashboards providing rich
context for your investigations

### Automated Response
Respond to threat with automated
actions and playbooks

### Cloud Visibility
Threat detection across your
Office365, Azure
and AWS footprint

### Vulnerability Management
Continuous monitoring of all your
internal, external and cloud systems

### Automated Detection
Hundreds of detection
use cases

### Darkweb Monitoring
Compromised credentials
and data breaches

### User Behaviour
Monitor all user activities across
endpoints and cloud systems
and detect anomalies

### Vendor Risk Reporting
Enrich your data with cyber
risk reporting of your supply
chain partners.

### Hunting and Response
Root cause analysis across all
attack vectors and automated
response capabilities

### Cyber Risk Protection
Built-in capabilities to proactively
detect data breaches and
impersonation attacks

### Cloud Controls Audit
Integrated cloud asset
management with CIS
control benchmarking

## Solution Highlights

ThreatDefence is the only solution in the industry that delivers continuous assurance across all your cyber security functions, and enables your security operations with rich threat context and unbeatable visibility across endpoints, servers, cloud and SaaS applications.

Paired with our 24x7 SOC as a Service, managed Threat Hunting, and Incident Response services, ThreatDefence delivers unprecedented value to organisations of any size.

**SEE BEYOND** the limitations of your current security tools

**BE ABLE** to answer any questions about your environment, report on anything.

**MANAGE RISKS** with third-party cyber risk protection

**PREVENT BREACHES** with continuous vulnerability management and device hardening

**BLOCK ATTACKS** with automated response capability and incident playbooks

**DETECT THREATS** with automated detection & threat hunting.

**PREDICT COMPROMISES** with dark web monitoring and digital brand protection

**RESPOND TO INCIDENTS** with 24x7 SOC and proactive incident response.

## About ThreatDefence

ThreatDefence provides innovative SIEM, SOC-as-a-Service and proactive cyber defence solutions to MSP's and Enterprises. Our Adaptive XDR Platform was created to help companies of any size to deploy a world-class detection and response, embracing all information that businesses can reach to, would it be within their network, on the dark web, or hiding deep into their supply chain.

We believe in open ecosystems and connect you to any and all threat intelligence feeds and log sources, instantaneously providing you with actionable security insights.
