

## VPN FOR TODAY'S GLOBAL WORKFORCE

VIPRE Encrypt.team is an easy to manage, cloud-based VPN and the secure way to protect employees from online threats while working remotely or on-the-go. Connecting to the internet via risky, unsecured Wi-Fi connections at coffee shops, hotels, airports, and even home networks puts the entire corporate network at risk.

A Virtual Private Network, or VPN, is a tool used to make a connection private on a public network and can greatly minimize a company's online risk. A VPN helps protect against hackers seeking to steal credentials, data, information and intellectual property. Public and untrusted Wi-Fi networks are unsafe, but a VPN provides a layer of protection between an employees' devices and other nearby devices as well as the internet at large.

VIPRE Encrypt.team encrypts all traffic between a user's device and VIPRE endpoints in the cloud, keeping all out-of-network users safe from snooping, online threats, attackers and vulnerabilities. There's also no infrastructure to set-up or manage. VIPRE Encrypt.team's management interface is easy to use and agents are compatible across several platforms including Windows, MacOS, iOS, Android and Amazon FireOS.

With Encrypt.team, the distributed cloud approach means that all your employee's traffic is encrypted, without the need to route all traffic through your bandwidth-limited corporate VPN, firewall, or UTM. And with our Private Endpoints feature, you can still have secure communications to corporate services running inside your offices or in hosted cloud environments. You get the best of both worlds, without the expense of setting up VPN hardware and adding extra bandwidth.

### Benefits of Business VPN

- Safeguard sensitive data, communications, internal documents and proprietary information
- Secure, private access while on untrusted Wi-Fi connections
- Safely access company services, databases, and proprietary information
- Secures websites not using a TLS encryption
- Mask company IP addresses for privacy
- Access content otherwise blocked or restricted while travelling internationally

### One Complete Network Security Platform

- Fully create, manage and secure networks from a multi-tenant cloud.
- Simplify secure access to local networks, cloud infrastructure and business applications, with one unified platform.

### Easily Manage and Scale

- Manage teams from a single account.
- Easily invite new users and remove inactive accounts.

### Private Endpoints

- Manage policy- and role-based secure access to company resources via cloud-hosted Private Endpoints.

### Network of 70+ Locations

- Always-on high speed VPN from a network spanning more than 70 locations in over 40 countries

Companies of all sizes have hurriedly transitioned to a distributed workforce, and in so doing, have often overlooked key security vulnerabilities. VIPRE Encrypt.team keeps users and data safe, while offering the flexibility and ease of use organizations need to stay up and running. Visit [VIPRE.com](http://VIPRE.com) for a free trial today.
