

## Useful Hints for Setting up and Managing VIPRE Site Manager & Security Awareness Training

**VIPRE Site Manager** provides MSPs a full-featured endpoint security solution with a centralised multi-tenant management portal for visibility across an entire client-base. Site Manager protects at the file, application and network layer, combining multiple layers of security with network- and application-agnostic DNS protection at no additional cost.

- ✓ Increased efficiency and profitability
  - ✓ Multiple layers of security
  - ✓ DNS and Web Access Control
- 
- Use this URL to register for your VIPRE Site Manager evaluation, the evaluation license is valid for 30 days. When signing up make sure you sign up listing your company as a “reseller” so that the trial is approved. <https://www.vipre.com/products/business-protection/vipre-site-manager/>
  - When you have **set up Site URL and Site Admin Email**, please advise SoftGen, this will enable us to register your evaluation and ensure prior to the evaluation expiring we can convert you to a production license. Once the production license is activated you will need to convert your own created sites/customers into active production within your Site Manager instance. <https://success.vipre.com/site-manager-manage/site-manager-converttrial-to-billed>
  - Multiple User Accounts - We would suggest that you create a user account for each person in your organisation responsible for managing your end user clients.
  - Migrating exiting VIPRE users:
    - End Point Server – just create the “site’ in Site Manager (essentially an End Point Cloud instance) and run the normal migration tool from the server pointing it to the new instance.
    - End Point Cloud – you will need to recreate the account in Site Manager Start from scratch. <https://success.vipre.com/endpoint-cloud-migration>

**VIPRE Security Awareness Training** is VIPRE’s cloud-delivered Security Awareness Training product. The solution is sold in a number of different flavours to fit a variety of needs, all of which deliver assessments, training, and phishing simulations through an integrated learning path.
