

SoftGen Managed Security Services

Security as a Service (SECaaS) is gaining momentum as a way to effectively combat the growing number and sophistication of cyber attacks.

Removing the need to invest in specialised skills and infrastructure provides greater flexibility while reducing costs for your business.

Cyber Security is about Risk Minimisation and Asset Protection. Our services provide actionable security intelligence, enabling direct action and targeted investment to secure your IT Infrastructure.

Our Security Essentials delivers a number of customised scans to establish an understanding of your Cyber Risk/Score.

- **Threat Assessment** is used to get a picture of the current security risk of your organisation. The deliverable is to identify areas of risk like:
 - Misconfigured Systems
 - Inadequate Control
 - Vulnerable Systems
 - Assets communicating with poor hosts
- **Dark Web Search** This is an automated scan that enables us to monitor Dark Web sites, searching data dumps (emails, passwords and documents) for stolen or leaked company credentials that are being offered for sale by cyber criminals
- **ReaQta Hive** - As the traditional concept of the IT infrastructure perimeter disappears, the attackers have moved to the soft spot of everybody's infrastructure: the **END POINTS**

ReaQta-Hive is an End Point Threat Response platform powered by A.I capable of detecting new and previously unknown threats, ranging from simple ransomware to more sophisticated non-malware attacks.
- The platform is capable of monitoring every End Point from outside the operating system by using the world's first NanoOS and providing real time behavioural data

to the local and centralised A.I engine. Immediate threats, lateral movements, and supply chain attacks are detected and reported in real time.

We can monitor your End Points 24 x 7, allowing our analysts to prevent any attacks before they occur.

ThreatDefence is a Unified Security Management Platform providing a real-time threat detection, analysis, and prevention system.

ThreatDefence uses log analysis and threat intelligence to minimise the risk of a cyber attack. The solution has been developed using "Best of Breed" Open Source Security and Business Intelligence (BI) tools.

Advantages of Managed Security Services

- all your digital assets or just the assets you nominate.
- the service can be provided as a one-off service or as a fully managed real time monitoring service.
- actionable reporting – prioritised step-by-step recommendations on how to rectify each vulnerability.
- an effective method for **all** organisations no matter the size.
- cost effective – we provide the tools and expertise for a single subscription fee.

"The costs of compromise can be more expensive than preventive measures".

Australian Signals Directorate

The Security Services offered by SoftGen are powered by leading security vendors both locally and overseas.
